# EpiTrax

## Infectious Disease Case Management, Surveillance and Outbreak Investigation software for Public Health

### SOFTWARE

- » Open source, highly configurable web application, supported by a consortium of public health agencies since 2015. (Original product version released 2008.)
- » Integrates with electronic lab reporting (ELR) and electronic case reporting (ECR) and supports configurable rules and automation
- » Allows routing of cases between departments or agencies to aid in the investigation process
- » Customizable data collection forms and work-flows supports any disease case management and state reporting process.
- » Integrates with any SQL-connectable BI system to provide analysis, visualization, and reporting

### BENEFITS

- » Improve and automate communication across geographic and departmental lines
- » Integrate with lab and healthcare data systems to validate and automate receipt of data
- » Contact management and tracing, outbreak detection and investigation
- » EpiTrax increases staff efficiency while providing an in-house data system enabling greater local disease surveillance and investigation capabilities.

### WHO USES EPITRAX?

- » Utah Department of Health
- » Kansas Department of Health and Environment
- » Missouri Department of Health and Senior Services
- » Southern Nevada Health District
- » Tarrant County (Fort Worth), Texas
